

Innovation is crossing the line...the line between what is expected and what it is capable. A relationship with Catalyst Imaging is having the power to make ideas reality, and to implement new concepts. Setting new boundaries and standards of service is among our top priorities.

The convergence of sign-making, civil engineering, and information technologies has enabled us to offer unprecedented solutions for our clients-at enormous savings. Since its inception, Catalyst Imaging has focus solely on providing cutting edge large-format printing services. Our range of services include the full line of Point-of-Purchase and Promotional imaging, Trade Show and Exhibit Graphics, Outdoor Advertising and Fleet Solutions, as well as Fine Art and Specialty Printing.

Clients will take advantage of a full service Pre-press department, innovating technical abilities, and professional project consultation. Most importantly, you will receive thorough technical support, tips, and professional insight to make our experience as seamless as possible.

By integrating our services with your marketing & advertising departments, we simplify your workflow by actually working as an extension of your own capabilities, rather than the traditional Service Bureau-to-Client relationship. This will increase your companies capabilities, while minimizing the risk of loss, or bottlenecks in productivity.

"...SETTING NEW BOUNDARIES AND STANDARDS IS AMONG OUR TOP PRIORITIES."
